

The shop floor knows first. The system finds *out last.*

What actually runs between an MES and Dynamics 365 — and why the order of posting decides the cost price.

A clipboard outlives three *ERP versions.*

Quantities written by hand, carried to an office in the evening, typed into the system. The numbers are always a shift behind reality — and every planning decision is made on yesterday's truth.

The gap is not on the shop floor.

Most shop floors already have an MES, or a controller that knows exactly what it produced. The gap sits between the shop floor and Dynamics 365.

Seven messages.

No catch-all interface.

Start	The order begins — several with one message
Report as finished	Quantity, without closing the order
Finish message	Sets the order to "Reported as finished"
Picking list	Consumption with lot ID
Route card	Times and quantities per operation
Job card	Labour time with financial dimensions
Decrease status	Order back to an earlier status

The finish message must not *post first.*

If the order closes before times and consumption are posted, the cost price is calculated wrongly — silently. So every message carries a priority: consumption first, finish message after. Regardless of how the MES sent them.

Checked. Then *posted*.

-
- 01 Validation rules belong to the interface, not the individual case
 - 02 What fails stays in the validation journal on the order — with a reason
 - 03 Posting profiles decide parameters, status and print
 - 04 Approval by hand or automatic — a setting, not development
-

Inventory is current.

Not a shift old.

Nobody types twice.

What the floor writes is in the system.

The cost price holds.

Because the order of posting holds.

IN SHORT

Feedback is not transport. *It is a posting.*

FlexxLink MES — the production module for Dynamics 365 — puts every message through the same chain as a partner document: record, translate, check, approve, post. Built by the Soluvine development team I have worked with since the Damgaard days.

Seven interfaces

REST, synchronous or asynchronous

30-day trial

no obligation to buy
