

A status is not a state. *It is a promise.*

What a posting profile decides when a message from the shop floor changes the production order — and which transitions are allowed.

The message
says “start”.
Nothing else.

What happens on start — which quantity, whether picking list and route card are created automatically, what gets printed — is not in the message. It is in the ERP. Somewhere.

The parameters belong to the *interface.*

A posting profile bundles the posting parameters per message type: start, report as finished, picking list, cards, release. It is assigned to the interface — per integration application. Configuration, not code.

Five transitions.

Each one checked.

Release	from “Created”, “Estimated” or “Scheduled” — otherwise rejected
---------	---

Start	order to “Started”, several per message if needed
-------	---

Report quantity	quantity, order stays “Started”
-----------------	---------------------------------

Report as finished	order to “Reported as finished”
--------------------	---------------------------------

Decrease status	back to an earlier status
-----------------	---------------------------

What gets printed is *in the profile.*

Route card, route job, job card — whether something is printed on release and what, the profile decides. The floor gets its paper without anybody clicking in the ERP.

Not every *transition goes.*

-
- 01 Releasing an order that is already released or started
 - 02 Starting an order that is not released
 - 03 Report as finished without a prior start
 - 04 Everything stays visible — with a reason
-

The floor triggers.

The ERP decides.

A parameter changes once.

Not in every message.

A wrong transition is rejected.

Not posted.

The floor may trigger a lot. *The ERP decides.*

FlexxLink MES — the production module for Dynamics 365 — keeps posting parameters in profiles per interface and checks every status transition before it is posted. Built by the Soluvine development team I have worked with since Damgaard.

Configurable	fitted to the process, not the other way round
30-day trial	no obligation
Microsoft AppSource	all solutions available there — soluvine.com
